New Site for Baltiyskiy Bank

Baltiyskiy Bank site has a modern page design that takes in consideration the corporate design style. It is also provided with the TWP in-house Content Management System, which enables bank's employees to easily change the site textual and graphical content as well as site navigation.

Access to content management is password-protected.

Navigation Manager

Technical Information

The Web site architecture is designed in line with Windows DNA 2000 application design patterns. The customer UI is developed using ASP.NET and XML/XSL and hosted on Microsoft Internet Information Server (IIS) 5.0. The application logic and data access code are resided in .NET class library written in Visual C#. The Visual C# components use ADO.NET to communicate with the SQL Server 2000.
