

Mobile Games

Production Line

Mobile games hold a significant place in our company's activity. Our highly professional team of more than 75 animators, designers, developers and programmers develops dynamic and eye-catching games.

Modern technologies enable us to develop games with great multimedia content. Flash and Java technologies, which allow high quality bitmap and vector graphics, gave the foundation for developing mobile games of a new generation.

At present time mobile games are completely comparable by quality with PC games. They include beautiful 2D and 3D graphics, involved action, high program logic and great number of levels.

We develop both single- and multi-player mobile games of all genres: Arcade, Classic, Logic, Maze etc.

Gladiator

In this mass multiplayer online role-playing game (MMORPG) a player creates characters specifying their swiftness, stamina, strength, agility and so forth. To test the character, it is exposed on an arena to fight the characters created by other players. A winner gets an award in the form of "experience", which depends on a fight's level of difficulty and can be used later on to create more powerful characters and to get new skills and additional capabilities.

Technical Details:

- Type: Macromedia Flash
- Multiplayer: yes
- Highscore function: yes
- Supported phones: Windows Pocket PC enabled phones. Also available for regular PC.
- Invitation
- Chat
